

**SCHMIDT
TRANSPO**

Merger

Application:

To combine production lines in one lane. Combining is done without turning or lateral touching of products.

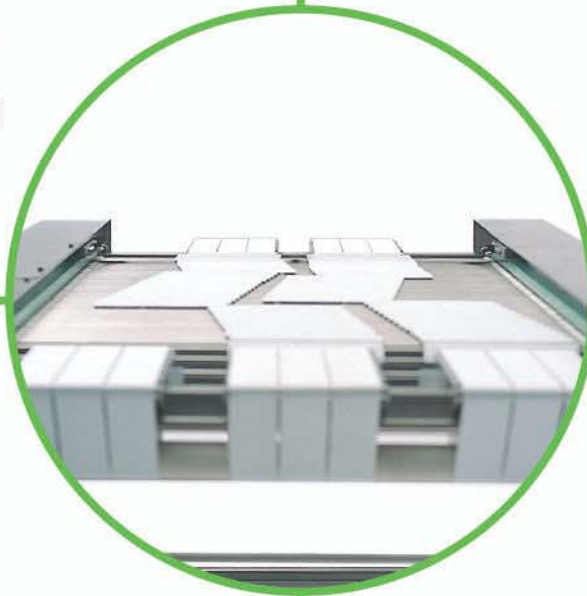

Construction:

The product will be fed to the merger synchronized. The transport carriers, fitted on transport rods, will be switched in the corresponding guidance, pick up the products and combine them.

Two or more lanes can be combined.

Capacity:

- up to 60 m/min. with transport chains
- up to 120 m/min. with toothed belt
- up to 400 products/min.

Advantages:

- No side forces on the products, therefore suitable for sensible goods
- High transport speed:
Maximum speed 120 m/min.
up to 400 products/min.
- Complete stainless steel design to handle also non wrapped food
- Control components designed to customers wishes
- Easy and fast assembly of product carriers for maintenance
- Designed to suit customers' requirements
